

Office of Electrical Inspection Generator Load Sheet

Line 1: What is the total computed load for the building or structure? _____ Amperes.

Line 2: What is the total output for the generator? _____ Amperes.

Line 2 is the number provided by the manufacturer that the generator can perform at continuously.

If Line 1 is greater than Line 2 shedding will be allowed to bring the load down to meet the generators' ability to meet Line 1.

Line 3: What is the shredded computed load? _____ Amperes.

Line 3 is the amount of the total reduction that shedding devices will provide.

Line 4: Subtract Line 3 from Line 1 _____ Amperes.

If Line 4 is smaller than Line 2 you can use this generator in this installation. This form will be filled out by the electrical contractor and provided to Saint Louis County Inspector at the time of inspection. If Line 4 requirements are met it will be used in the approval process. A copy of this sheet will be placed with the generator. In addition, the Customer will also be provided with a copy for their records.

Address of installation: _____ **Permit #:** _____

Customer: _____ Date: _____

Contractor: _____ Date: _____
